These figures rest on an assumption

1 expense account carrying R 10 900,00 was treated as operating expenses rather than cost of sales because it has no recognised subtype.

1 revenue account carrying R 21 800,00 was treated as turnover rather than other income because it has no recognised subtype.

Gross profit above rests on classifications nobody has made: up to R 10 900,00 of expense could belong above the line as cost of sales, and up to R 21 800,00 of revenue could be other income rather than turnover. Those are ceilings on what is unclassified, not corrections to apply.
